

# Light water?

## What is for you?

# You are thirsty!

There are two glasses of water.  
One glass contains more of heavy water  
another one contains less heavy water.

## What is your choice?

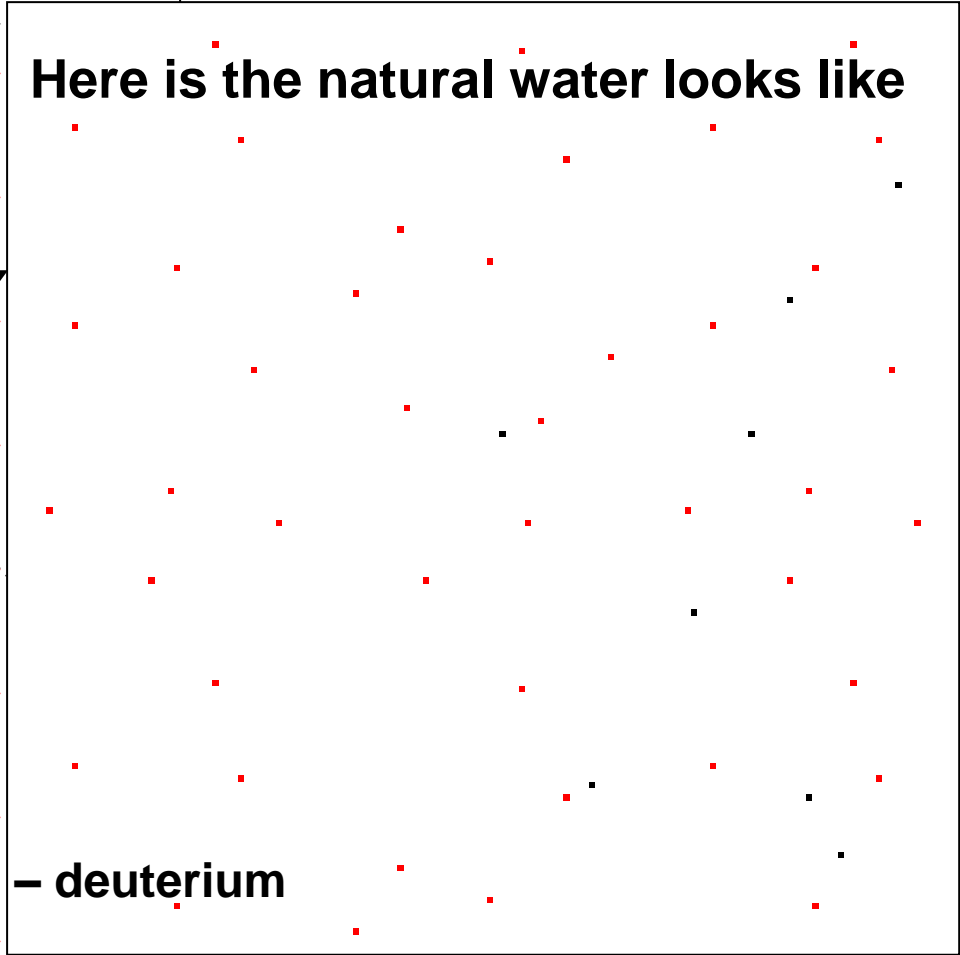

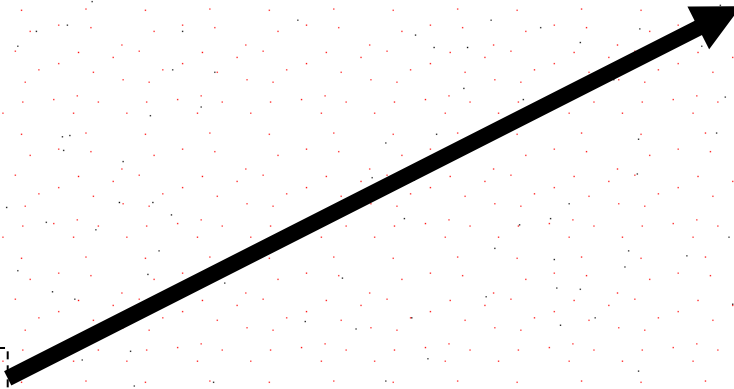

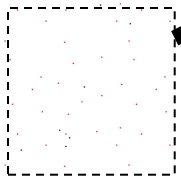

You have chosen a glass, with **less heavy water**.  
Mind you, this was **your independent choice**.  
In fact, you always know that  
**Heavy water is harmful!**

**Each liter of pure natural water contains about 3 grams of heavy water**

**Here is the natural water looks like**

**Black points is a heavy isotope of hydrogen – deuterium**

**Red dots is a heavy isotope of oxygen -O<sup>18</sup>**

**All another points – white. It's the absolutely clean water – H<sub>2</sub>O**

Body of each of you contains about a half glass of heavy water  
Your daily portion of heavy water is harmful.

You would think that heavy water is not too much, but even a few grains of sand in the engine of your car can result in loss of power and life.

**Why are  
you poisoning  
by heavy water  
if the Light water  
exist?**

**How to choose the right glass of water, because heavy water is indistinguishable to the color, taste, and smell?  
It is possible to determine its concentration only with the help of expensive equipment.**

**We produce for you  
a lot of light water.  
The choice you have made.**

# And it is not harmful?

Many years ago people was considered clean water like transparent-clear water, because they were unknown microbes. When there was knowledge of the microbes water began to boil.

The chemical composition of the water was also unknown. Was water, more or less useful for folk omens. Now you can find out the composition of water and apply the appropriate filter, increasing the utility of water from a natural source – well, river, or lake.

Knowledge of isotopic impurities clean water appears not so long ago, and it is now possible to make drinking water more, than more pure.

## Light water - more clean water!

# How do we make the water more pure?

First, our water is filtered from all kinds of traditional mechanical cleaning, bacterial and chemical contaminants.

Once that water is even cleaner in special installations where the process is repeated several times the water cycle in nature.

This method is called low-temperature vacuum distillation, and we own the patent on its use.

## So we are made most clean water!

# Why no worldwide market yet?

Scientists investigate DDW - Light water more than 50 years.

But only now we are able to get it in big volume with acceptable for end-user price.

**We did it for you!**

# Light water - even more health benefits water!

- You will become more resistant to stress and disease
- You will support the heavy load
- You will recover quickly from stress
- You will increased activity
- You will reduce or get rid of anxiety and depression

**Efficiency  
of your body will pump up!**

# The Light Water !

**It is for you!**
