

# **Deuterium content of natural water: an environmental risk factor for human disorders**

I. Pomytkin  
A. Chernopiatko

Budapest  
4th International Congress on Deuterium Depletion  
October 17- 18, 2019

# Definitions

**Isotopes** are variants of a particular CHEMICAL ELEMENT with the same atomic number but with different atomic masses.

**D = <sup>2</sup>H = Heavy Hydrogen = Deuterium**

**Hydrogen**

**Oxygen 16**

**Heavy Oxygen 17**

**Heavy Oxygen 18**

**Isotopologues** are MOLECULES that differ only in their isotopic composition.

**HOD = <sup>1</sup>H<sup>16</sup>O = <sup>1</sup>H<sup>2</sup>H<sup>16</sup>O = Semi-Heavy Water**

| Isotopologue                                | g/Kg WSMOW    |
|---|---------------|
| <sup>1</sup> H <sub>2</sub> <sup>16</sup> O | 997,032536356 |
| <sup>1</sup> H <sub>2</sub> <sup>18</sup> O | 2,227063738   |
| <sup>1</sup> H <sub>2</sub> <sup>17</sup> O | 0,411509070   |
| <sup>1</sup> HD <sup>16</sup> O             | 0,328000097   |
| <sup>1</sup> HD <sup>18</sup> O             | 0,000728769   |
| <sup>1</sup> HD <sup>17</sup> O             | 0,000134998   |
| D <sub>2</sub> <sup>16</sup> O              | 0,000026900   |
| D <sub>2</sub> <sup>18</sup> O              | 0,000000059   |
| D <sub>2</sub> <sup>17</sup> O              | 0,000000011   |

# Definitions

- DDW - Deuterium-depleted water is water obtained by depleting deuterium-containing isotopologues from natural water.

- “Light Water” is water with a higher concentration of the lightest stable isotopologue  $^1\text{H}_2^{16}\text{O}$  than occurs naturally in certain area .

Both natural-hydrological processes and technological deuterium depletion lead to an increase isotopologue  $^1\text{H}_2^{16}\text{O}$  and decrease HOD.

- Low Deuterium Water is water with a lower concentration of deuterium than occurs naturally in certain area.

# Deuterium generates a risk of depression

Replacement of plain water with deuterium depleted water may significantly reduce the risk of disorders

## Conclusions

**That's one small step in deuterium depletion,  
one giant leap for mankind's health.**

---

*Table 2.1. Common Mistakes in Terminology and Phraseology*

| Mistake   | Recommended Expressions   | Explanation   |
|---|---|---|
| referring to the symbol $\delta$ as 'del'                                       | Since the time of the early Greeks, the name of this symbol has been and remains <b>delta</b> .   | The word <i>del</i> describes either of two things in mathematics and science: an operator ( $\nabla$ ) or the partial derivative ( $\partial$ )  |
| $\delta^{13}\text{C}$ composition   | $\delta^{13}\text{C}$ value; carbon isotope composition   | $\delta^{13}\text{C}$ values are numbers and a <i>composition of numbers</i> has no meaning.  |
| Isotopically depleted water   | $^{18}\text{O}$ (or D) depleted water   | A given sample of water is neither depleted nor enriched in isotopes.   |
| Stable water isotopes have been widely used as tracers. . .                     | Stable O and H isotope ratios in water have been used. . .  | Only elements have isotopes. It is the H and O that has the isotopes, not $\text{H}_2\text{O}$ .  |
| heavy (light) $\delta^{18}\text{O}$ values                                      | high (low) $\delta^{18}\text{O}$ values   | As numbers, $\delta$ -values can be high or low, positive or negative, but not heavy or light.  |
| Isotopically negative   | relatively low $\delta$ values  | Isotopic ratios are not negative or positive; they are lower or higher than those of the standards.   |
| depleted $\delta^{13}\text{C}$ value  | low $\delta^{13}\text{C}$ value (relative to another)   | $\delta^{13}\text{C}$ values are numbers and, as such, they cannot be depleted or enriched.   |
| enriched (depleted) carbonates.   | isotopically heavy (light) carbonates   | The words <i>enrich</i> and <i>deplete</i> are overused and much abused. These words should be reserved for describing a <b>process</b> that changes the content of the heavy isotope of the element in some substance. |
| enriched (depleted) compositions  | (relatively) $^{18}\text{O}$ -rich or $^{13}\text{C}$ -poor carbonates  |   |
| depleted carbon reservoir   | reservoir of (isotopically) light carbon  |   |
| oxygen isotopes in chert; inferred from carbon isotopes; isotopes of soil water | oxygen isotope <b>ratio (composition) of</b> chert; inferred from carbon isotope <b>measurements</b> ; isotopic composition of soil water | Such written mistakes are a carryover from loose oral communication.  |
